

Seven

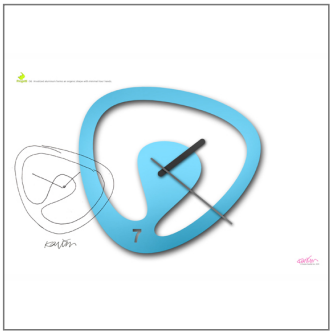

mod: 2085
design by Karim Rashid

Sinuous and elegantly effective curves have always been the unique style of the starchitect Karim Rashid. Seven, conceived by Rashid himself, is a modern clock of refined design where full and empty spaces intertwine to reveal a carved '7' situated in the lower part of the face. The two-tone hands have been designed and created specifically for this clock. It is made of steel and is painted with non-toxic paints. Its battery powered quartz mechanism is German made.
