

Rulo

mod: 2520
design by Gerardo MarÃ¬

The Rulo valet stand by Gerardo MarÃ¬ represents the perfect synthesis between design and functionality, the basis of "true design", which only few designers have managed to interpret with such mastery. It is made from a single 6-metre long continuous metal tube. There is a small tray in the centre for emptying pocket contents into. Do not be deceived however by its apparent simplicity, it's actually quite complicated to produce. Painted with two coats of high quality paint, can be used in any elegant environment.
