

Stick

mod: 2495
design by Barbero Design

The hanging Stick, designed by Barbero Design, has been inspired by ice-lolly sticks. The designer has used six of these and made them magically meet in the center, thus creating a stylish and modern piece. With the use of a differently colored stick, the designer wanted to highlight the game of overlap that is created where the pieces intersect. Its simple and clean lines mean it is well suited to any room in the home or office. It has been made from wood and painted with non-toxic paints and can very easily be assembled and disassembled.
